DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 28-37, only as drawn to method of creating a transgenic plant comprising a DNA molecule encoding an acidically modified nucleic acid binding protein containing an N-terminal extension of acidic amino acid residues, classified in class 800, subclass 278.
- II. Claims 28-56, only as drawn to method of creating a transgenic nonhuman animal comprising a DNA molecule encoding an acidically modified nucleic acid binding protein containing an N-terminal extension of acidic amino acid residues, and drawn to transgenic nonhuman mammal whose cells comprise a recombinant acidic domainant negative polynucleotide sequence and method of producing said transgenic mammal, classified in class 800, subclasses 14 and 21.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-II are biologically and functionally different and distinct from each other and thus one does not

Art Unit: 1636

render the other obvious. The methods of Groups I-II comprise steps which are not required for or present in the methods of the other groups: introducing into a plant cell of a plant an isolated DNA molecule encoding an acidically modified nucleic acid binding protein containing an N-terminal extension of acidic amino acid residues (Group I), which step in plant cells is substantially different and distinct from the same method step in animal cells, and introducing into an animal cell of a nonhuman animal an isolated DNA molecule encoding an acidically modified nucleic acid binding protein containing an N-terminal extension of acidic amino acid residues (Group II). The end result of the methods are different: transgenic plant (Group I) and transgenic nonhuman animal or mammal (Group II). Thus, the operation, function and effects of these different methods are different and distinct from each other. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be

Art Unit: 1636

examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Certain papers related to this application may be submitted to Art Unit 1636 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). The official fax telephone numbers for the Group are (703) 308-4242 and (703) 305-3014.

NOTE: If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.
